High efficient

STM offers complete range of palletization systems with high / low level infeed with single / multiple entry for loose bottles and pack layers, able to handle cans, jars, bottles, cartons, bundles and crates.

The main advantages of these machines are: heavy-duty construction, reliability, quick and easy maintenance, constant repeatability of the production cycles. This is an automatic machine with carton / bundle input from above or below and with one or more pallets (in the multi pallet version) for palletizing products incoming from one or more packing lines. Also available in version with single or multiple carton input.

The machine is used for palletizing elements on pallets and allows the pallet to be film wrapped, in preparation for transport.

THE FASTEST PALLETIZING ROBOTS IN THE WORLD

COMAU Robots for any challenges

Modern industrial robots are perfect for palletisation. They speed up the process and make it highly efficient. They protect packaging from damage. The appropriate configuration allows for adjusting to the given line. They may manage a few systems and enhance the performance. Additionally, it uses innovative control system.
